FOR IMMEDIATE RELEASE

RAM FORCE 9.5 DUAL DISC CLUTCH SYSTEM FOR

2010-UP CAMARO V6

RAM proudly introduces our Force 9.5 clutch systems for 2010-up Camaro V6 applications. This unique design features sprung hub discs on both top and bottom for a smooth engagement and drastic reduction in gear rattle over conventional dual disc clutches. A unique input shaft support system is incorporated into the flywheel that allows the input to spin true without runout that can also cause excessive noise. The billet aluminum flywheel features a surface ground steel insert for optimum mating and smooth engagement. Units are available in organic and metallic versions to handle torque loads approaching 900 foot/pounds at the tires. Pedal effort is comparable to the stock clutch. This clutch system is a great choice for V6 enthusiasts installing aftermarket turbos, blowers, or nitrous.

75-2105	Force 9.5 dual disc organic friction, 1-23 spline	Jobber \$1100.00
75-2105N	Force 9.5 dual disc 900 series friction, 1-23 spline	Jobber \$1175.00
