2010-11 Chevrolet Camaro

ABOUT THE VEHICLE

Make: Chevrolet

Model: Camaro

Year: 2010-11

STANDARD/ OPTIONAL

- AM/FM in-dash CD Player
- USB/3.5mm Aux/mp3 input
- Satellite Radio Capable
- Steering Wheel Controls
- 6 speaker amplified system

SCOSCHE®

SPEAKER NOTES

Front Speakers

Upper Door: 1"

Lower Door: 6 3/4"

Speaker Adapter: SAGMHR634

Speaker Harness: TBA

Speaker Assembly: 8mm screw.

Dimensions:	Tweeter	Door
	L: 1.605	L: 6.348
	W: 1.605	W: 6.348
	D: 1.128	D: 3.106

Rear Speakers

Rear Deck: 6X9"

Subwoofer: TBA

Speaker Adapter: TBA

Speaker Harness: TBA

Speaker Assembly: 8mm screw.

Dimensions:

Rear Deck
L: 9.135
W: 6.520
D: 4.605

APPLICATIONS

Dash Type: New Integrated Dash

Aftermarket Type: Single

Aftermarket Kit: TBA

Harness: GM19B / GM19RB

Antenna Adapter: VWA3B / VWA3RB

Amplifier Location: Left rear QTR panel
inside Trunk.

Auxiliary Input: Center console storage

FACTORY COLOR CODES

PRELIMINARY:

Disconnect the negative battery cable.

Make: Chevrolet

Model: Camaro

Year: 2010-11

RADIO REMOVAL

1. Turn ignition to the ON position and shift vehicle into drive.
NOTE: Battery must be connected. After completing step 1, disconnect the negative battery cable and proceed with the following steps...
2. With Panel Removal Tool, unclip gauge panel, unplug and remove.
3. With small flat screw driver, unclip screw cap located on the lower front side of the shift knob then extract (1) T-20 Torx screw and remove shift knob.
4. Extract (4) 7mm screws securing shifter console, then with pick tool, unclip (1) clip located on each side under the shifter console, unplug and remove.
5. With Panel Removal Tool, unclip left and right center console's panel's.
6. Extract (1) Phillips Head Screw from each side located on the front outside area of the center console.
7. Extract (1) Phillips Head Screw from each side of center console's rear panel, lift and pull back to remove.
8. Extract (3) Phillips Head Screws behind center console's armrest.
9. Extract (1) Phillips Head screw in front of cup holder.
10. With Panel Removal Tool, unclip 12V and USB/3.5mm housing inside the armrest, unplug and remove.
11. With Panel Removal Tool, unclip center console, and remove.
12. Extract (2) 7mm screws securing Radio Panel located under the A/C controls, then with Panel Removal Tool, unclip Radio Panel, unplug and remove.
13. Extract (4) 7mm screws securing Radio, unplug and remove.

FRONT DOOR TWEETERS

1. With Pick Tool, remove the plastic mad inside door grip and extract (1) Torx T-2 screw.
2. With Pick Tool, remove plstic cover inside door handle and extract (1) 7mm screw.
3. Extract (3) Phillips Head Screw at the edge of door panel.
4. With Panel Removal Tool, unclip door panel, unclip door handle cable, unplug all harnesses and remove.
5. Extract (1) Phillips Head Screw securing Tweeter from behind door panel.
6. With Panel Removal Tool, unclip Tweeter front panel, unplug and remove.
7. With Pick Tool, unclip Tweeter from panel.

FRONT DOOR SPEAKERS

1. With Pick Tool, remove the plastic mad inside door grip and extract (1) Torx T-2 screw.
2. With Pick Tool, remove plstic cover inside door handle and extract (1) 7mm screw.
3. Extract (3) Phillips Head Screw at the edge of door panel.
4. With Panel Removal Tool, unclip door panel, unclip door handle cable, unplug all harnesses and remove.
5. Extract (1) Phillips Head Screw securing Tweeter from behind door panel.
6. With Panel Removal Tool, unclip Tweeter front panel, unplug and remove.
7. Extract (1) 7mm screw securing Speaker then with Panel Removal Tool, unclip Speaker, unplug and remove.

2010-11 Chevrolet Camaro

VEHICLE DISASSEMBLY

PRELIMINARY:

Disconnect the negative battery cable.

Make: Chevrolet

Model: Camaro

Year: 2010-11

REAR DECK SPEAKERS

1. Remove the bottom portion of the back seat by pulling up on the front—end then push down on the back-end and pull forward.
2. Fold down the back seat, then release the left latch and lift the seat to un-hook it. Do the same for the right side.
3. With Panel Removal Tool, unclip running board on driver and passenger side.
4. With Panel Removal Tool, unclip large side panel under left and right rear window and remove.
5. With Panel Removal Tool, unclip top left and right panel, above rear deck next to rear window, un-hook safety clip and remove. NOTE: There's an Airbag under this panel on both the driver and passenger side. Be sure not to apply too much pressure and don't use sharp objects to remove.
6. With Panel Removal Tool, unclip screw cover securing top portion of driver and passenger seatbelt and extract (1) T-45 Torx bolt.
7. With Panel Removal Tool, unclip Airbag cap located above the T-45 Torx seatbelt bolt you just removed and extract (1) 7mm screw. Do this for both the driver and passenger side.
8. Extract (1) 7mm screw securing top side panel located next to the back passenger's top portion of the seatbelt. Do this for both the left and right side.
9. With Panel Removal Tool, unclip top side panel and sit it down.
10. Unplug harness goin to the rear deck stop light, harness is located next to the top portion of the back right passenger seatbelt.
11. With Panel Removal Tool, unclip (4) plastic clips securing rear deck panel, lift panel to unclip and pull towards the front of the car to remove.
12. Unplug speaker from inside the trunk and extract (1) 7mm screw to remove.

AMPLIFIER

12v/USB/3.5mm

BATTERY

Interfacing a keyless upgrade system with a newer GM vehicle

Some of the newer GM vehicles will have a 7vdc rest state on the door lock motor wires which will affect the programming or operation of a keyless upgrade security system. In order for the keyless upgrade security system to program and function correctly the arm, disarm and disarm defeat wires must be provided a ground resting state. Wiring the system in accordance to the diagram below will provide a rest state for the keyless upgrade.

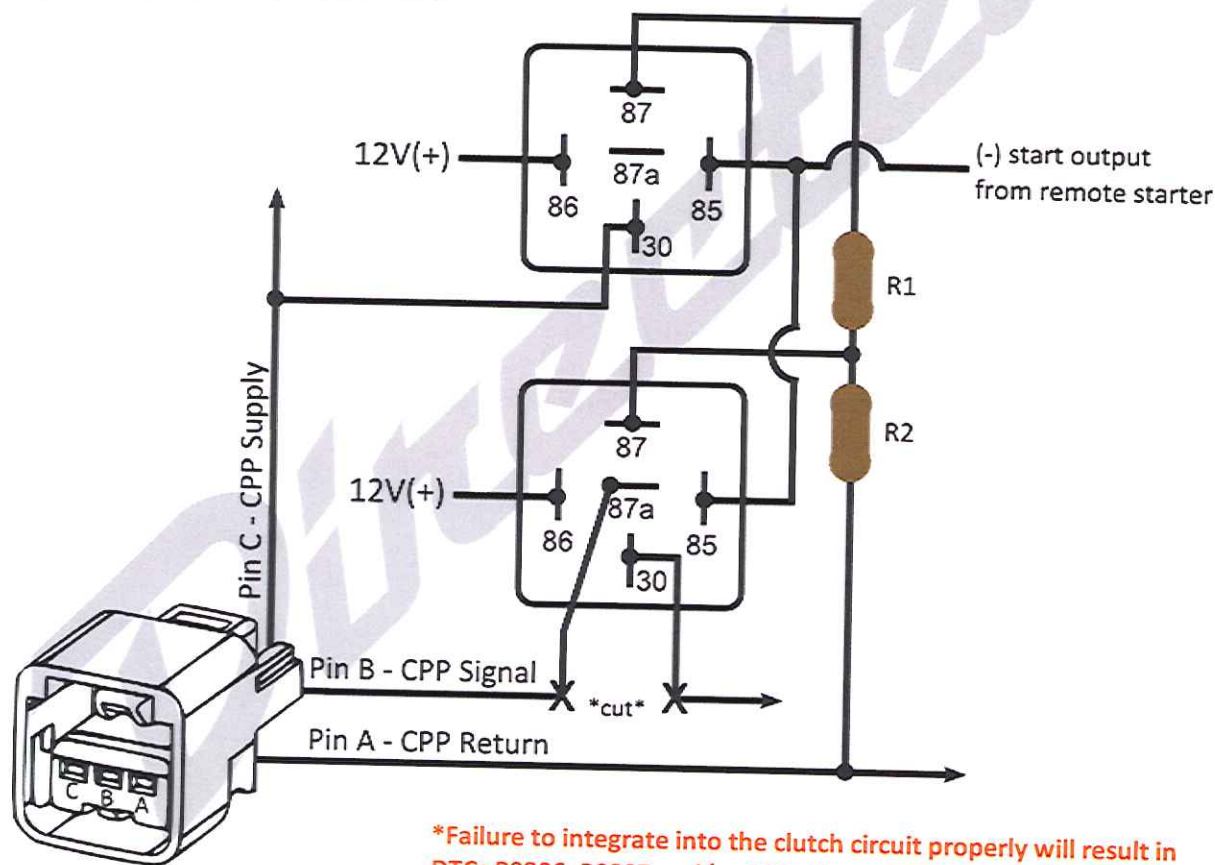

Important! This Wiring Information Is Being Provided Free Of Charge On An "As Is" Basis, Without Any Representation Or Warranty. It Is The Dealer's Responsibility To Verify Any Circuit Before Interfacing With It Using A Digital Multi-meter. Directed Electronics Inc. Assumes No Responsibility With Regards To The Accuracy Or Currency Of This Information. Proper Installation In Every Case Remains The Responsibility Of The Installer. Directed Electronics Inc. Assumes No Liability Or Responsibility Resulting From An Improper Installation, Even In Reliance Of This Information.

GM variable-voltage clutch pedal interface

Some newer GM vehicles have a variable-voltage clutch circuit that consists of three clutch pedal position (CPP) wires: CPP Supply, CPP Return and CPP Signal. The CPP Supply wire will test as ~4V-5V with ignition ON, CPP Return will test as Ground (this is a reference ground to ECM chassis) and the CPP Signal wire will vary in voltage between ~1V-5V depending on the position of the clutch pedal. In order to gather the data required to build an interface circuit for remote start, locate the CPP wires (at the clutch pedal), test all 3 wires and note down which wire is what, then cut all 3 wires individually.

How to test for R1/R2: Measure the switch-side resistance between CPP Signal and CPP Supply with the clutch fully depressed and note the value down as R1. Next, measure the switch-side resistance between CPP Signal and CPP Return with the clutch fully depressed and note the value down as R2. Lastly, build the circuit shown below.

***Failure to integrate into the clutch circuit properly will result in DTCs P0806, P0807 and/or P0808!**

Desired result: When the relays are energized, voltage between R1 and R2 should be the same value (or very close) to the value measured on CPP Signal when the clutch is fully depressed.

IMPORTANT! This wiring information is being provided free of charge on an "as is" basis, without any representation or warranty. It is the dealer's responsibility to verify any circuit before interfacing with it using a digital multi-meter. Directed Electronics assumes no responsibility with regards to the accuracy or currency of this information. Proper installation in every case remains the responsibility of the installer. Directed Electronics assumes no liability or responsibility resulting from an improper installation, even in reliance of this information.

Newer GM Starter Kill

Some newer GM vehicles (PK3) do not have a dedicated starter motor wire at the key cylinder ignition harness; the starter motor in these vehicles is engaged when the PCM receives signals that the key has been turned to the START position by means of monitoring the IGNITION and ACCESSORY wires **at the ignition key cylinder**. When the ACC wire loses 12V(+) while the IGN wire stays at 12V(+), the PCM engages the starter motor. A relay can be set up to keep the ACC circuit energized while the security system is armed in order to prevent the PCM from engaging the starter motor. If a remote starter is also being installed, a 2nd relay must be used to prevent the starter kill relay from engaging during remote start. Alternatively, you may also interrupt the starter motor wire in the engine compartment. **If the relays are installed under the hood, be sure to take necessary precautions in order to protect them from the elements!**

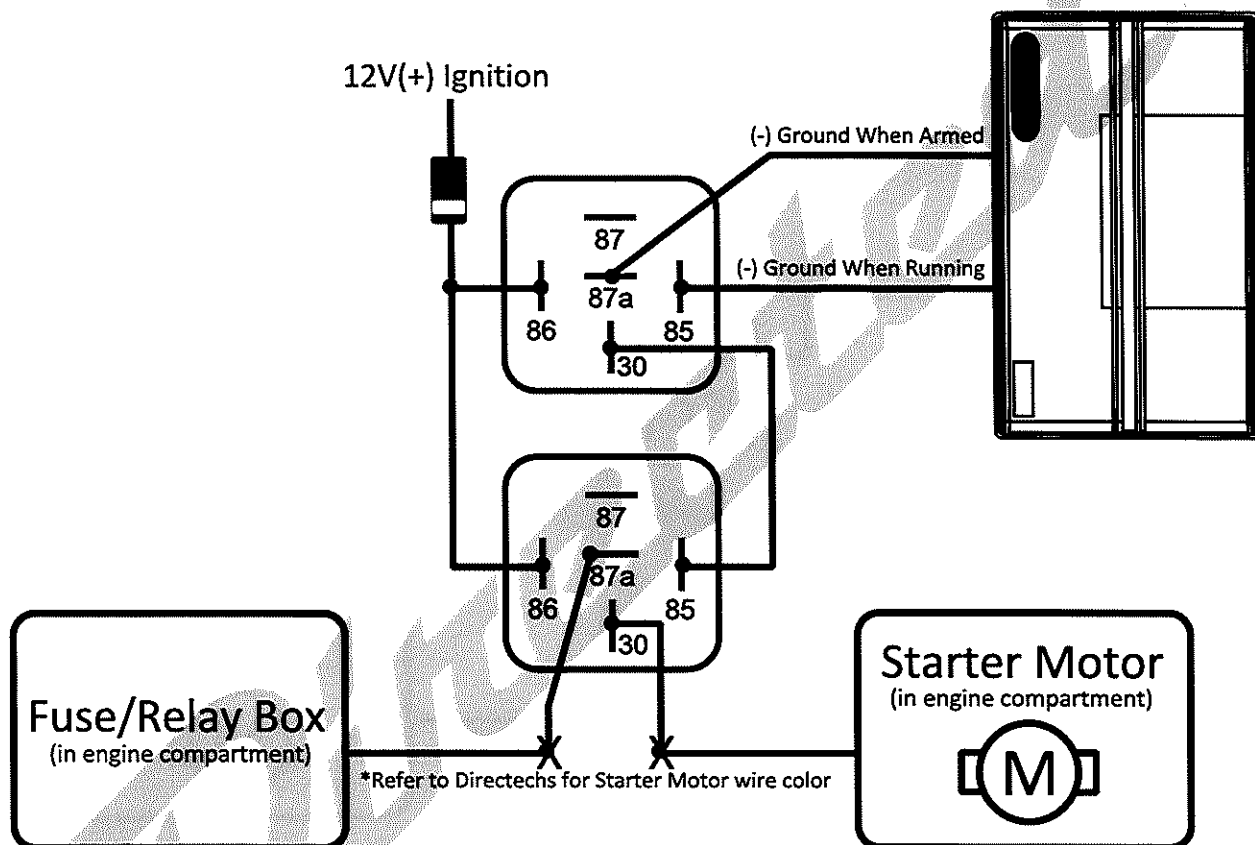

Note: This method will only work on PK3-equipped vehicles!

Security WITH Remote Start (alternate method*)

*This method will be necessary on non-PK3 vehicles such as the Colorado/Canyon/H3, etc.
