

Make your own "Stealth" mud flaps for \$5 or less.

I wasted over \$60 buying the Stealth mud flaps from RPI Designs. They are made from cheap crap plastic which fell apart in less than 4 months. The rear flaps attach in a retarded way, and I decided not to replace them. The front flaps use 2 existing screws to mount, and are much stronger.

Front flaps after less than 4 months and 900 miles.

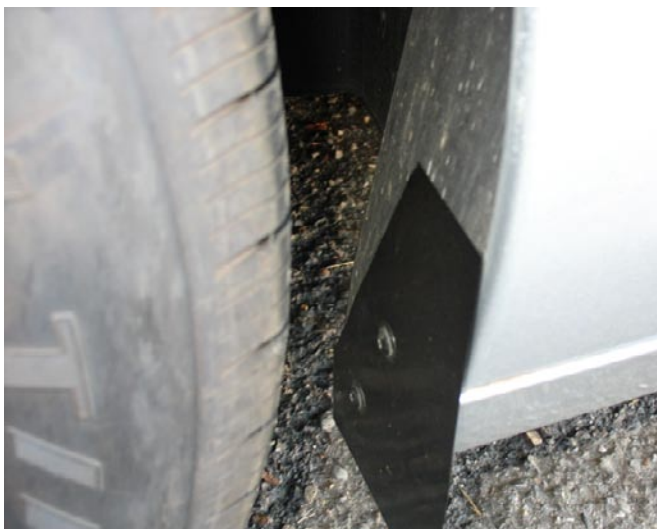

I went to Lowes, and picked up some 5x8" metal roof flashing flats for \$.67 each. They also had larger 8x12" flats for \$1.07 each.

I used a piece of cardboard as a template to see where to drill the holes in the flats. I also removed excess material with a jigsaw. then painted 2 coats of crinkle black on each side, and one coat of clear. Total cost with paint was under \$5.
